

# SIOS AppKeeper

## Application Availability for AWS EC2

### Key Benefits

#### Availability Protection

- Improve availability and meet SLAs for your applications in EC2
- Addresses 85% of typical EC2 system impairments.

#### Save IT Time and Cost

- Eliminate the cost of manual IT intervention to investigate and remediate issues

#### Scales with Your Environment

- Automatically detects and protects new systems as they are added.

#### Management Flexibility

- Choose the way you want AppKeeper to respond to system impairments:
  - Simple alerts
  - Application service restart
  - Complete instance reboot..

### Reduce Downtime in EC2

AWS eliminates the cost and complexity of buying and managing servers in a traditional, on-premises data center. While cloud vendors offer SLAs and a variety of cloud management tools, the average customer with only three AWS instances still experiences application downtime at least once a month. Why? Many common system impairments and software issues are not covered by cloud vendor service level guarantees or addressed by cloud management tools.

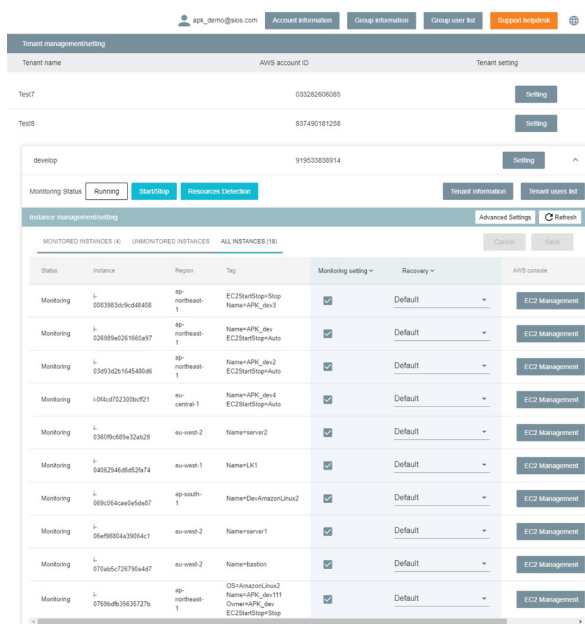

SIOS AppKeeper is a SaaS solution that automates recovery from service impairments. It is an essential element to ensuring the availability of your cloud applications. Use it alone or to add recovery capabilities to an application performance monitoring (APM) tool.

### Monitor. Respond. Restart.

APM tools identify issues but often overwhelm IT with hard-to-manage alert storms. Worse, they do nothing to address the issues they identify. IT or third-party expertise is still needed to bring applications back online.

SIOS AppKeeper independently monitors and directly responds to failures within the AWS EC2 environment. AppKeeper addresses 85% of application service failures. No more IT resources wasted on diagnosing and remediating issues. SIOS AppKeeper features an intuitive dashboard that lets you see the health status of your EC2 instances at a glance. You control AppKeeper's response when it detects an issue.

Try it free!

SIOS AppKeeper shows you the health status of all of your instances at a glance. You choose the response actions.

## Instant Availability

Get up and running quickly - there is nothing to install. You just sign up online and authenticate your AWS account. SIOS AppKeeper connects to your AWS account and scans your environment to identify all EC2 instances. Simply select which EC2 instances and services you want to protect and choose any of the following options.

- Monitor and Alert
- Restart Services
- Reboot Instances
- Reboot Instances Only if Restart of Services Fails (Default)

## SIOS Portfolio of Products

SIOS Technology has decades of experience in developing and supporting innovative solutions to help customers recover from infrastructure and application failures quickly. SIOS products provide the protection you need - whether you need high availability clustering for mission-critical applications or availability protection in EC2 for applications that don't require clustering.

## About SIOS

SIOS Technology Corp. high availability and disaster recovery solutions ensure availability and eliminate data loss for critical Windows and Linux applications operating across physical, virtual, cloud, and hybrid cloud environments. SIOS clustering software is essential for any IT infrastructure with applications requiring a high degree of resiliency, ensuring uptime without sacrificing performance or data - protecting businesses from local failures and regional outages, planned and unplanned. Founded in 1999, SIOS Technology Corp. (<https://us.sios.com>) is headquartered in San Mateo, California, with offices worldwide.
