

Extending Clusters for Disaster Recovery

Key Benefits

Disaster Protection

- Easy, cost efficient high availability and disaster protection for business critical applications.

Flexibility

- Mix physical, virtual, and cloud environments for maximum efficiency.

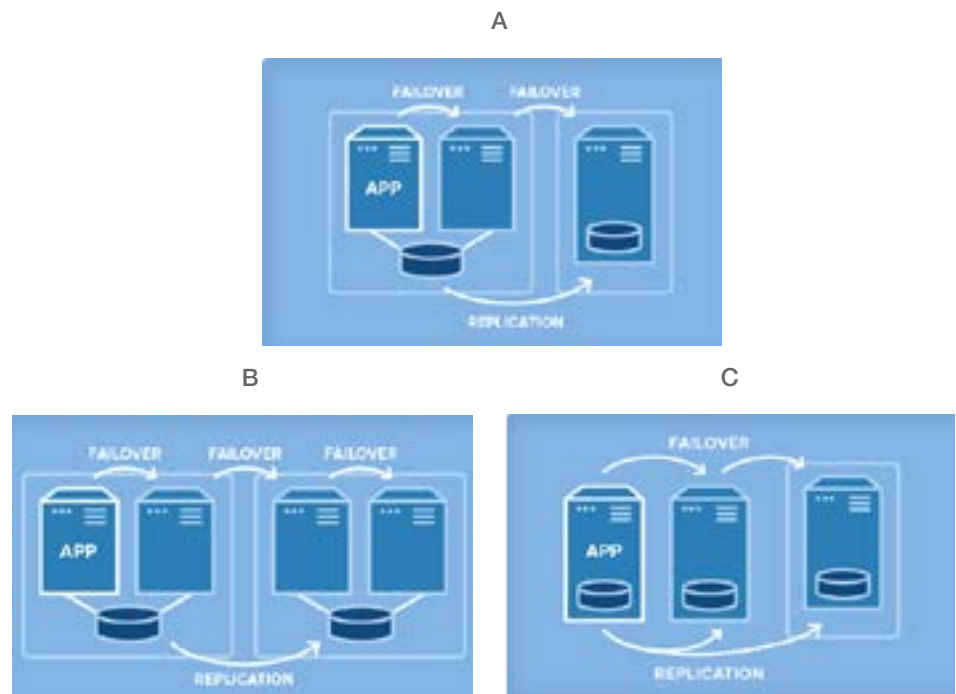

Ease of Use

- Intuitive console for easy ongoing monitoring and management.

SIOS #SANLess software lets you extend a cluster for disaster recovery without requiring an additional SAN. It lets you build a cluster using local attached storage or storage resources available to the instances in your cloud environment and gives you the flexibility to replicate between the configurations of your choice – between SAN and #SANLess environments and any combination of physical, virtual, and cloud configurations. No vendor lock in. No need for identical hardware at the source and destination.

Easy, cost-efficient disaster protection.

Use SIOS #SANLess to extend your cluster to a remote location or to the cloud for efficient, real time, block level replication and disaster protection for your business critical applications. SIOS software enables failover of applications across geographic locations and cloud availability zones or regions to provide sitewide, local, and regional disaster protection.

SIOS SAN and #SANLess clusters span environments, letting you add a single or multinode #SANLess cluster in a remote disaster recovery site (A); to replicate between shared storage environments (B), or to use a cloud for easy, cost efficient disaster protection without the cost of a remote data center.(C).

Configuration flexibility.

SIOS SAN and #SANLess software gives you the flexibility to build a cluster with your choice of: operating system (Windows or Linux), industry standard hardware; number of nodes (2-32); deployment/workload distribution (active/active, active/passive); replication schemas (N-to-1 or 1-to-N); and storage options (HDD, SSD, iSCSI, FC) or the combination that best meets your needs.

Easy to use. Easy to own.

You can build a SIOS cluster and configure it in minutes using our intuitive interface. SIOS also makes managing your clusters easy with a user-friendly management console that displays the status of protected servers, communication paths, resources and applications at a glance.

About SIOS

SIOS delivers innovative software solutions that provide application availability and disaster protection for Windows and Linux environments.

Clusters Your Way.™

An essential ingredient in any cluster solution, SIOS SAN and #SANLess clustering software provides the flexibility to build clusters your way to protect your choice of Windows or Linux environment – and any configuration (or combination) of physical, virtual and cloud (public, private, and hybrid) storage – without sacrificing performance or availability. SIOS provides unique #SANLess clustering software that eliminates both the cost and the single-point-of-failure risk of traditional SAN-based cluster environments.

Founded in 1999, SIOS Technology Corp., is headquartered in San Mateo, California, and has offices throughout the United States, United Kingdom, and Japan.
