

# High Availability for The Oil & Gas Industry

## Protecting Systems From Downtime and Data Loss

SIOS Technology's high availability and disaster recovery (HA/DR) software protects critical applications, databases, and systems used in the oil and gas industry from downtime and disasters due to infrastructure, network, and application failures.

## Protects Both Windows and Linux Applications and Databases

SIOS offers the flexibility to build SAN and SANless clusters for Windows or Linux environments on-premises physical servers, virtualized servers, and in the cloud. Easily move Windows Server Failover Clustering to the cloud without disruption, or build a Linux clustering environment with application-specific intelligence built-in. Configure clusters across cloud availability zones and regions for maximum HA/DR protection, or create hybrid cloud to meet your specific needs. SIOS helps you ensure regulatory requirements are met, while keeping your systems online and available at all times.

## The Industry's Most Reliable Failover Protection

SIOS products protect various applications and the databases they run on from downtime and data loss. Here are a few examples of what SIOS can protect:

### Environments & Platforms Protected

Microsoft Azure Cloud, AWS EC2, Google Cloud Platform, Hybrid Cloud, VMware, Hyper-V, On-Premises

### Operating Systems Protected

Windows, SUSE Linux, Red Hat Linux, Rocky Linux

### Databases and ERPs Protected

SQL Server, SAP, SAP S/4HANA, Oracle, SharePoint, MaxDB and many others
